

PICOPATT Internship

Schedule & Deliverables Update

An Pham | LIRMM-ADVANCE | Supervisors: Luc & Reda

May 13, 2026

Simulated dataset (data/picoclimate_test): how it was generated

- Simulate **12 locations** across **Nantes** and **Montpellier** over **30 days**.
- Collect **4 time slots/day** (06/12/18/23 UTC) and **23 variables** per slot (weather + environment proxies).
- Add realistic missing data: some missing values + occasional full-sensor block outages (`missing_block_flag`).
- Produce two tables: `raw_measurements.csv` (slot-level) and `window_features.csv` (daily features for clustering).

Dataset samples (first 5 rows, selected columns)

raw_measurements.csv

Defense + submission (key dates)

Jun 26

Report target

Submit report

Jul 2

Upload slides

24 hours before the defense

**Jul 3
11:45**

Defense (in person)

15-min presentation

- June 8: first report draft (v0.1).
- June 26: evaluation form deadline (lab supervisors).
- June 27 (midnight AoE): university deadline.
- Slides: 15 minutes (aim 1 slide per minute).
- Report format: scientific paper in LaTeX, $\geq 12-14$ double-column pages.

Next week schedule

Next week

- **May 19:** endoscopy; 4h hospital stay.
 - Doctor requirement: an accompanying person for 24h after the endoscopy.
- **May 20:** telework; to be counted as a day off.

Work plan (now → June)

- Start writing the final report now; lock structure early.
- Implement the changes we agreed last meeting while generating final figures.
- Maintain reproducible outputs to support report tables/plots.
- Build a 15-min defense deck in parallel once the report narrative stabilizes.

After the defense

- After July 3: continue internship normally at the lab.
- Paper/manuscript submission: discuss scope and timing after the defense.

Thanks — questions / suggestions welcome.
